

The World's Most Trusted Conveyor

White's Automated Uniform Storage and Retrieval Systems Provide **Safe Distancing and minimized human contact**

White Conveyors U-Pick-It, GBX & AUS Uniform Delivery Systems can eliminate the person to person contact at an attended counter where infections can spread. Designed for any size resort and casino property, White's Uniform Storage and Retrieval Systems are completely automated, providing adequate distancing while minimizing human contact. Pick-up and drop-off is performed outside the uniform room through a "No Touch" auto-open/close door, eliminating human contact during the transaction.

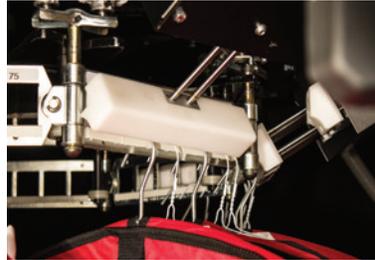

White Conveyors has successfully automated hundreds of uniform rooms worldwide with exceptional security and performance. Uniform room labor costs are reduced while service and safety for team members is improved.

Limited Exposure to Germs or Infections:

White's systems provide the safest, most secure and sanitary solution for uniform storage and retrieval. Clean laundry is loaded in a secure room. Employees retrieve uniforms from outside the room through a "No Touch" auto-open/close sliding pocket door. There is no interaction with an attendant and no need to touch anything except their own uniforms.

- ✓ 24/7/365 convenience and security - saving thousands of dollars in uniform losses each month
