## Carousel Rotating Table

Speed Check's Carousels are used for cart makeup and are located at the end of flatwork conveyors. The circular shape offers greater access to the goods, allowing multiple carts in a condensed area, and provides space for more operators to transfer goods to the carts. It's made with a 12-gauge stainless steel bed with painted mild steel sides and a heavy-duty structural steel frame. The side gap opening allows linen transfer from a belt conveyor.

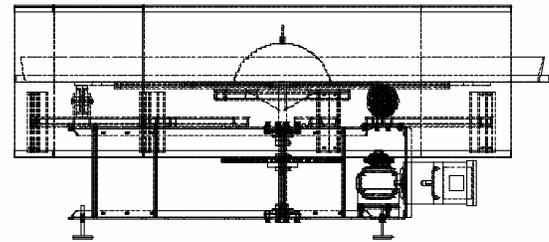

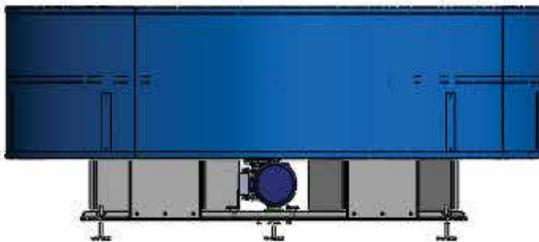

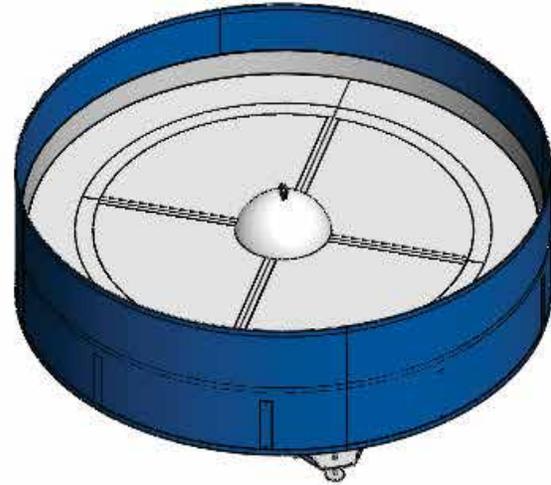

# Carousel Rotating Table

## Standard Features

- ✓ 12 Ga. stainless steel bed with painted mild steel sides
- ✓ Heavy duty painted structural steel frame
- ✓ 1/3 horsepower motor 115V - 1 PH (available 1/3 HP - 3PH)
